8. Operational Period Debrief				
General Remarks/Accomplishments:				
<p>During the operational period, Chalmette Air Operations Team 3 collected Summa canisters from established air monitoring/sampling locations. Teams also collected data from AreaRaes (VOCs) and DataRams (particulates) for upload to scribe.</p> <p>Team 3 mobilized at 0200 to the Chalmette LRV command post located at the Poydras St. Bernard Fire Station number 8. Teams conducted their daily safety meeting and prepared for deployment. Safety Topic: Review Project Organizational Chart and Make sure you have all your teammates' cell phone numbers. Teams traveled from station to station at approximately 2 hr intervals. During the operational period, all equipment functioned properly, with exceptions noted in "Special Situations" section below. 3 Summa canisters were collected and shipped. No crude oil/petroleum odors or evidence of oil spill burning were detected (see exception noted in Special Situation). Teams completed their shift at 1030, rendezvoused at the Chalmette LRV location, and debriefed to the incoming team (Team 1).</p> <p>Weather: Mostly Cloudy, Winds from East at 5-10 MPH. Temperature varied from 78 to 81 degrees Fahrenheit during shift.</p> <p>C02 (29.86609 N, 89.89108 W) Fire Station number 8, Poydras LA C03 (29.82209 N, 89.60862 W) Emergency Operations Center, Hopedale, LA C04 (29.96082 N, 90.00132 W) Fire Station number 1, at 1500 Aycock Street in Chalmette, LA</p> <p>Special Situations: Odors were noted to be emanating from the Murphy Oil Refinery, flares were burning more severely than normal. The CO4 sampling location borders a gas pipeline station from which "mercaptan"-like odors were emanating. Information from both occurrences were called into both the Chalmette command post and the EPA hotline, in case of residential complaints. Data RAEs at CO2 and CO4 stopped datalogging when internal memory was full. Data was downloaded to a laptop then the internal memory was cleared to allow restarting of datalogging. Team 3 was unable to perform the field calibration checks on the Area RAEs during their shift due to a lack of calibration gases. Replacement gases will arrive today via FedEx so that field calibration checks may resume.</p> <p>Analysis: Summa canisters: TO-15 method for volatile organics</p> <p>Sample nomenclature: C02201005080001-8, Can # RA2147, Regulator # 08053 C03201005072315-8, Can # HL0962, Regulator # 08031 C04201005080044-8, Can # RA0886, Regulator # 08069</p> <p>ADDITIONAL/SUPPORTING DOCUMENTATION <input type="checkbox"/> Response Manager <input type="checkbox"/> Photographs <input type="checkbox"/> Video <input type="checkbox"/> Logbook <input type="checkbox"/> Other: _____</p>				
Health & Safety/Problem Areas:				
No HS problems.				
Next Operational Period Requirements (Resource Additions or Reductions; Tactical Changes)				
Crews will continue to operate as described above. No new tasking expected
